#### **DETAILED ACTION**

#### Terminal Disclaimer

The terminal disclaimer filed on December 29, 2003 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on Application Number 09/480,058 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### Response to Arguments

In view of applicant's Terminal Disclaimer, see application paper number 17, filed December 29, the obvious double patenting rejection of claims 1-4, 6-9, 18, 23-25, 30, and 36-39 and the objection of claims 5,10-17, 19-22, 26-29, 31-35, and 40-46 are withdrawn.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6, 9, 10, 18, and 19 are rejected under 35 U.S.C. 102(e) as being anticipated by Blair et al.

Regarding claim 6, Blair et al. disclose a HDLC Asynchronous To Synchronous Converter which teaches all the claimed subject matter "providing data formatted...in an

Application/Control Number: 09/480,747 Page 3

Art Unit: 2634

asynchronous manner" in claim 6 as follows: providing data formatted with a synchronous modem transmission protocol is anticipated by the synchronous application programs in Col. 4, line 13; an asynchronous serial pin of a modem circuit is anticipated by element 76 of figure 4 and Col. 7, lines 59-60; using the asynchronous serial pin to transfer the data (formatted with the synchronous modem transmission protocol) is anticipated by the synchronous applications to be transmitted through the asynchronous port in Col. 4, lines 18-19; between the modem circuit and an external circuit (through the asynchronous serial pin in an asynchronous manner) is anticipated by the synchronous workstations in Col. 4, line 14.

Regarding claim 9, Blair et al. further teach the claimed subject matter "transferring... from the modem circuitry to the external circuit" in figure 4, note the bidirectional arrows.

Regarding claim 10, Blair et al. further teach the claimed subject matter "indicating...transmission protocol information", note transparency modifications in Col. 2, lines 42-43.

Regarding claim 18, see claim 9.

Regarding claim 19, see claim 10.

### Claim Objections

Claims 7, 8, 11-17, and 20-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 09/480,747

Art Unit: 2634

Page 4

# Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1-5, and 23-46 are considered allowable because none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims including an integrated modem and line-isolation circuit being configured so that data formatted with a synchronous modem transmission protocol can be transferred through the asynchronous serial communication interface port. The closes prior art, Kanekawa et al., (US Patent Number 6,389,063/ cited in office paper number 8) shows a similar circuit including an integrated modem and line-isolation circuit. However, Kanekawa et al. fails to teach circuitry included within the integrated circuit configured so that it transfers data formatted with a synchronous modem transmission protocol through an asynchronous serial communication interface port. This distinct features has been included in independent claims 1, 23, 30, and 37 rendering them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 09/480,747

Art Unit: 2634

### Conclusion

Page 5

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Guillermo Munoz whose telephone number is 703-305-4224. The examiner can normally be reached on Monday-Friday 8:30a.m-4:30p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
